SKILLS

- ❖ C++, C
- ❖ Java, Springboot, RestApi
- ❖ Data Structures and Algorithm
- ❖ HTML, CSS, JavaScript
- ❖ Python
- ❖ Machine Learning
- ❖ Natural Language Processing
- ❖ MySql

EDUCATION

- ❖ Information Technology | Government College Of Engineering Amravati CGPA: 8.20 | 2026
- ❖ XII (HSC) | Z.P. Agarkar Science College 88.33% | 2022

EXPERIENCE

- ❖ **Student Intern | Infosys Springboard** (oct to dec) - 2024
- ❖ **CytoAuto Clustering Project – (Automated cell population clustering)**
 - Project-based internship focused on developing a semi-supervised machine learning model for cell population clustering in cytometry data.
 - Enhanced the accuracy and interpretability of cell population identification to support biological research.
 - Responsibilities included model development, data preprocessing, and performance evaluation for optimal clustering precision.
 - I achieved 97% accuracy and 99% AURAC in semi supervise model
- ❖ **Tools: Google Colab**
- ❖ **Technology: Python, Machine Learning**
- ❖ **Impact:** Contributed to advancements in automated cell classification, aiding biological research and analysis.
- ❖ <https://github.com/vedantgit04/Cytoauto-Clustering->

ACADEMIC PROJECTS

- ❖ **AI-Powered Health Monitoring and Disease Detection System**
 - Automated 90% of patient report generation using LLM, reducing manual effort from 2 hours to 15 minutes per case, and deployed a LLM chatbot trained on a 500+ medical article knowledge base to analyze symptoms, achieving 40% faster diagnosis.
 - Achieved 92% diagnostic accuracy by integrating real-time sensor data.
- ❖ **Tools: Arduino, Machine Learning, , LLM**
- ❖ **Technology: Python, Web Development**
- ❖ <https://github.com/vedantgit04/AI-Powered-Health-Monitoring-and-Disease-Detection-System>
- ❖ **Text-Analytics-Hub: Summarization and QA**
 - Reduced text analysis time by 50% with a custom NLP summarization model (BERT, spaCy) that condenses 10,000+ word documents into 200-word summaries at 95% semantic accuracy, validated on a 1,000+ article dataset.
 - Automated video-to-text conversion using NLP-driven speech recognition (Whisper API) and summarization, processing 500+ hours of video content into concise summaries with 90% key-topic retention, slashing manual review time by 70%.
- ❖ **Tools: Web-based interface**
- ❖ **Technology: Python, Natural Language Processing (NLP) libraries**
- ❖ <https://github.com/vedantgit04/Text-Analytics-Hub-Summarization-and-QA>
