Summary

I'm Vedant Dhole, an Information Technology student at Government College of Engineering Amravati with a CGPA of 8.20. I'm passionate about backend development and artificial intelligence, with hands-on experience in Java, Spring Boot, Python, Machine Learning, and Natural Language Processing.

Experience

Infosys Springboard | Remote

Machine Learning Intern | 10/2024 - 12/2024

CytoAuto Clustering Project – (Automated cell population clustering)

- Project-based internship focused on developing a semi-supervised machine learning model for cell population clustering in cytometry data.
- Enhanced the accuracy and interpretability of cell population identification to support biological research
- Responsibilities included model development, data preprocessing, and performance evaluation for optimal clustering precision.
- I achieved 97% accuracy and 99% AURAC in semi supervise model

Skills

C++, C, Data Structures and Algorithm, OOPs, Java, Springboot, RestApi, MySql, HTML, CSS, JavaScript, Python, Machine Learning, Natural Language Processing, Git,Github

Education

Government College Of Engineering Amravati | Amravati,Maharastra

Information Technology | 07/2026

Cgpa: 8.20

Academic Projects

1)GcoeaSync

- Built a full-stack community app for GCOEA using management, club portals, student marketplace, and college feed.
- Spring Boot, Next.js & MySQL, featuring event
- Implemented secure authentication via JWT and scalable
- **Tech Stack:** Java (Spring Boot), React (Next.js), MySQL.
- [Link](#)

2) Healthsense AI

- Built an AI diagnostic platform with 5+ ML models, including a symptom-based disease predictor (92% accuracy) and a CHD risk analyzer (AUC-0.89).
- **Developed medical tools:** LLM-powered chatbot, LAMA Vision for radiology/skin analysis, and respiratory disease detection from audio (85% precision).
- **Integrated IoT system** for vital monitoring with 92% sensor accuracy
- **Tech Stack:**Python, TensorFlow, PyTorch, Flask, Next.js, MongoDB, Arduino IoT.
- [Link](#)

3) Summarization Tool

- A web application for summarizing text and YouTube video content using natural language processing, built with Spring Boot (Java) and Python.
- **Dual Backend:** Java manages API requests and the frontend, while Python handles summarization using Word2Vec.
- **Key Features:** Enables text and video summarization, with robust URL validation and fixes for infinite loading, enhancing user experience.

Achievements

I secured 1st place in Code Hunt, a challenging competition held under Anusandhan, the national-level tech fest by Prof. Ram Meghe College of Engineering and Management
